KA- NTC1-M6 Fluid Temperature Sensor

- **Miniature size**
- **IP67 sealed**
- **Rugged construction**
- **NTC Thermistor**
- **Custom designs**

The KA-NTC1 Series of sensors are designed to measure fluid temperatures on race car or bike applications.

Typical applications include coolant, engine/gearbox oil, hydraulic fluid.

The design allows easy customisation to suit most applications.

KA Sensors offer a complete solution for sensing and control applications in motorsport, including wiring and trackside support.

Range (FS)	-30 to +150°C
Sensor type	NTC thermistor, 3kΩ @ 25°C
Accuracy	±1°C
Construction	Aluminium, hard anodised
Seal	Viton 'O' ring
Cable	300mm long. 26 AWG
Environmental protection	IP67
Options	Tip Length Thread Size- M12, M10, M8, M6 Stainless Steel Body Cable Length Thermistor type PT1000

Temp	ohms
-30	53100.000
-20	29121.000
